

LETTER OF RECOMMENDATION

To whomsoever it may concern,

I wholeheartedly recommend Abhinav for a Master of Science in Computer Science. I have worked with him for the entirety of his undergraduate program, whether by mentoring him on courses or working with him on projects.

I worked closely with him on two major projects, where he consistently delivered exceptional results, which reflects his dedication and problem-solving skills. In both of his projects, Abhinav's ability to fuse theoretical knowledge with practical expertise shows his potential as a future innovator in computer science. I mentored Abhinav in a college-funded project about a **Live Virtual Assistant to help visually impaired people** in the context of a physics lab. He proposed an IoT module integration for real-time data capture of the physics lab scenario. His role in choosing the right image captioning algorithms was essential, with the captions providing accurate descriptions of the lab scenario. The bilingual support offered in the speech synthesis stage shows that Abhinav has given unwavering importance to inclusivity. I also mentored Abhinav during his Final Year Project, centered around the topic - **Multi-Modal Behavioral User Authentication**. He was highly dedicated to conducting literature surveys and proposing an innovative system to address the gaps in existing research. His project aimed to enhance security by developing a multi-modal authentication system using keystroke dynamics and mouse movements. Notably, Abhinav combined insights from multiple user interaction modes to improve the accuracy of his model. His meticulous data collection and analysis, followed by the creation and training of a sophisticated model for user identification, showcased his analytical prowess.

Abhinav also studied **"OOP using JAVA"** and **"Compiler Design"** courses under my mentorship. Throughout the courses, his performance has been a testament to his foundational understanding of the subjects. He consistently scored above 90% in all assignments, highlighting his grasp of the subjects. In the JAVA course, Abhinav exhibited an in-depth understanding of fundamental concepts while delving into advanced Java topics. Abhinav's enthusiasm for Java extended beyond personal achievement; he devoted extra time to mentoring other students, significantly elevating their exam performance. Abhinav's performance in the Compiler Design course was outstanding as well. He actively engaged in discussions, posing intriguing questions about the design issues of compilers at various stages and about the role of Lex and Yacc programs in designing compilers. Abhinav further showcased his proficiency in the two courses by implementing two mini projects – A user-friendly app for a Kanban Board in JAVA and a mini-compiler for a new language, demonstrating his self-motivation towards learning.

Abhinav is well-prepared for exceptional performance in any professional environment he enters. His ability to apply his skills effectively is evident in his consistent track record of academic excellence and impactful project contributions. Hence, I wholeheartedly endorse him as an outstanding candidate for advanced studies, convinced of his potential to excel and contribute meaningfully to any endeavor.

Yours Sincerely,

Dr. B. Bharathi
