UNIVERSITET

## Letter of Recommendation – Abhinav Ramalingam

Dear Admissions Committee,

It is my genuine pleasure to support Abhinav and endorse his application for the PhD position. Abhinav was a student in my course, *Large Language Models and Societal Consequences of Artificial Intelligence*, last year (fall, 2025).

Ekta Vats

Assistant Professor in Machine Learning  
Docent in Computerised Image  
Processing  
Beijer Researcher

Department of Information Technology  
Box 337, SE-751 05 Uppsala  
Sweden

Visiting address:  
Hus 10, Lägerhyddsvägen 1  
751 05 Uppsala, Sweden

The course included two assignments and a project. One assignment focused on LLMs and involved developing a chatbot application for answering questions in mycology. The second examined the societal consequences of AI by evaluating LLM trustworthiness across benchmarks covering dimensions such as truthfulness, safety, fairness, robustness, privacy, machine ethics, transparency, and accountability. The final project required students to develop an LLM-powered application for a more complex real-world use case.

Abhinav demonstrated strong analytical and technical capabilities throughout the course. In particular, he showed an excellent ability to define problem statements while balancing multiple competing objectives. This was especially evident in his project, where he developed an AI-powered career assistant featuring cover letter drafting support, job-skill matching, and resume gap analysis. He designed the application to balance alignment with job requirements while maintaining adherence to structural writing guidelines.

He also demonstrated a natural inclination toward evaluation-driven system design, incorporating both qualitative and quantitative assessment metrics into his work. His scientific communication skills were equally good. In his reports and presentations, he clearly explained his experiments, justified methodological decisions, and thoughtfully interpreted results. He consistently structured his work with clarity, discussed the practical implications and limitations of his approaches, and identified meaningful directions for improvement. Beyond his technical strengths, Abhinav is highly creative in designing solutions to complex problems. He is capable of proposing novel ideas while remaining grounded within rigorous technical and methodological frameworks.

During his time in the course, Abhinav demonstrated both independence and strong collaborative ability in pursuing new knowledge and developing innovative solutions. I therefore strongly recommend him for this position. I am confident that this opportunity will further strengthen his research capabilities and enable him to contribute valuable insights to the field.

Yours sincerely,

Dr. Ekta Vats
